

POKEDEX – GitHub API Integration (AJAX Enabled)

Problem Statement :

Pokemon lovers do not find a place where they can search for a pokemon, its abilities and much more. Designing a website which finds the pokemon, finds the regions where these are originated from and much more.

Features :

Pokedex is a website which takes data from api and shows the information about a given pokemon, regions and the different types of the pokemon implemented.

Technologies Used:-

- (1)HTML
- (2)CSS
- (3)Java Script
- (4)Bootstrap
- (5)AJAX

Sources/End-Points:-

- (1)Name of Poki and other info - <https://pokeapi.co/api/v2/pokemon/>
- (2)Regions of the pokemon - <https://pokeapi.co/api/v2/region/>
- (3)Search for a region - <https://pokeapi.co/api/v2/region/>
- (4)Types of pokemon - <https://pokeapi.co/api/v2/type>
